

GAURANSH KATE

JAVA BACKEND DEVELOPER

Pune, India | +91 8815383700 | gauranshkate.it@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Java Backend Developer with hands-on experience building REST APIs and microservices using Spring Boot, Spring Security, and Hibernate/JPA. Skilled in designing event-driven systems with Apache Kafka, multi-tenant SaaS architectures, and transactional systems with optimistic/pessimistic locking for correctness under concurrent load. Comfortable across the layered Controller-Service-Repository stack, containerizing services with Docker, and validating designs under realistic concurrency and throughput conditions.

Technical Skills

Languages	Java, SQL
Backend & APIs	Spring Boot, Spring MVC, Spring Security, REST API Design, Hibernate, Spring Data JPA
Microservices & Distributed Systems	Microservices Architecture, Apache Kafka (Producers/Consumers, Event-Driven Pipelines), Multi-Tenancy, Optimistic/Pessimistic Locking
Database	MySQL, H2, Indexing, Transaction Management
Architecture & Design	Layered (Controller-Service-Repository), Clean Architecture, DTO Mapping
Tools & Practices	Git, GitHub, Maven, Docker, Docker Compose, Postman, Swagger/OpenAPI, Agile/Scrum

Projects

High-Throughput Distributed Ledger & Wallet System

Spring Boot - MySQL - JPA

- Engineered a wallet and ledger system using optimistic locking (JPA @Version) on wallet balances to guarantee atomic updates under concurrent access, favoring throughput over pessimistic locks for read-heavy access patterns.
- Modeled an immutable financial ledger (Wallet, Transaction, LedgerEntry, TransactionAudit), separating mutable balance state from an append-only audit trail for full traceability.
- Validated concurrency safety with 40-50 simultaneous debit requests against shared wallets across 1,000+ wallets and 20,000+ transaction records, confirming zero balance drift via automatic conflict-retry.

Scalable Multi-Tenant B2B SaaS Backend

Spring Boot - Spring Security - MySQL

- Designed a shared-database, multi-tenant REST backend using a tenant-id discriminator pattern to eliminate per-tenant schema provisioning and simplify onboarding.
- Built a custom JWT filter extracting tenant context from authenticated tokens and propagating it via ThreadLocal, enabling automatic repository-level tenant filtering with no per-query checks.
- Delivered core SaaS modules (Users, Roles, Customers, Projects, Tasks, Invoices) and verified complete tenant isolation via integration tests across 10 tenant organizations, 100+ users, and 3,000+ tasks with zero cross-tenant data leakage.

Real-Time Event-Driven Notification System

Spring Boot - Apache Kafka - Docker

- Built an event-driven notification pipeline on Apache Kafka, decoupling producers from Email, in-app, and WebSocket consumers across 5 topics for independent channel scaling.
- Implemented exponential-backoff retry with Dead Letter Topic routing for failed deliveries, tagging failures with correlation IDs for end-to-end traceability.
- Sustained 250-300 events/sec throughput at 70-120ms average end-to-end latency across 15,000+ test events in a local Docker deployment, monitoring consumer lag via Kafka metrics.

Education

Bachelor of Engineering in Information Technology

Smt. Kashibai Navale College of Engineering, Pune

2025

Higher Secondary (Class XII), Science

St. Xavier's International School

2020 - Score: 76%

Secondary School (Class X)

St. Xavier's International School

2018 - Score: 64%

Java Development Course - Naresh i Technologies

2025-2026

Achievements

- Scored 93% in MHT-CET (Maharashtra Common Entrance Test)

Certifications

- Java Full Stack Development Certification - Naresh i Technologies
- Java Programming Certification - HackerRank
